Assignment 1 Deliverables:

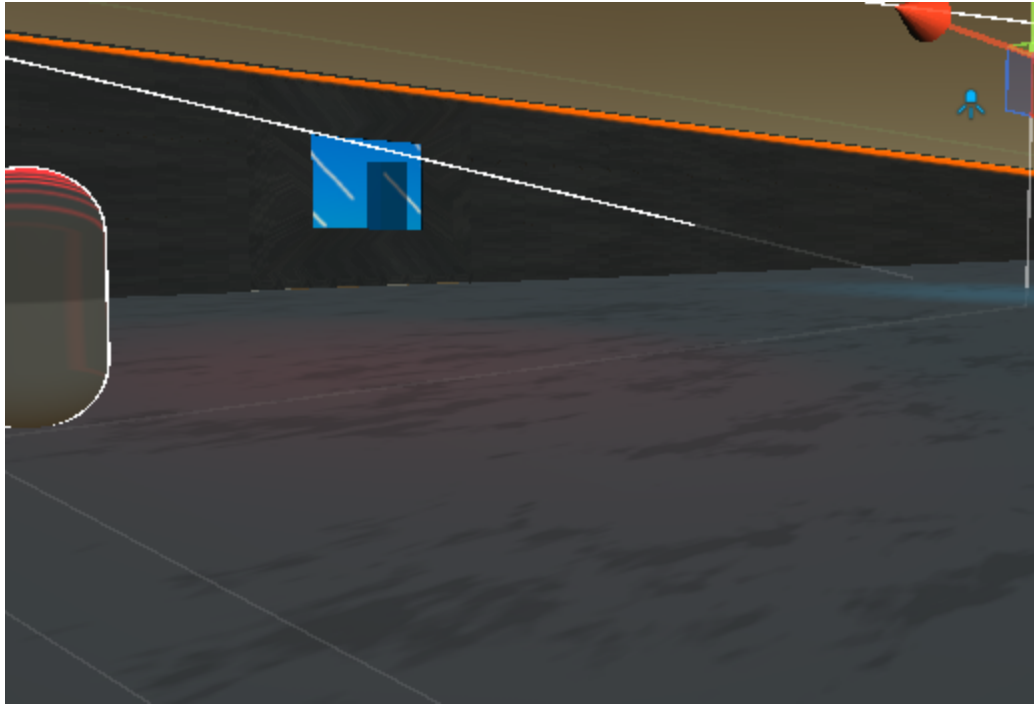

A proper win condition was made so that the player can complete the game, dealing damage to enemies is possible now as it wasn't at the time of the first presentation.

Shader wise the toon shader with the rim lighting has seen an upgrade with another mask where it takes in another ramp and based on the new ramp draws the new shape.

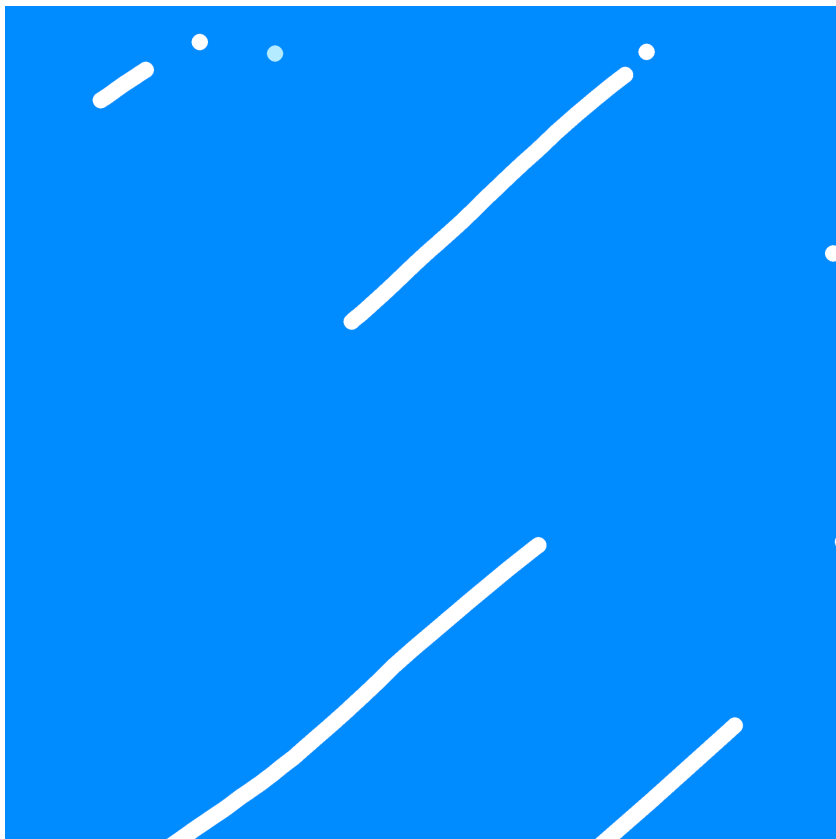

Texturing:

In terms of texturing a floor texture was made by me in substance designer to use for in the project, I also made it so that it exports a normal map along with it so that it can be used with the shader.

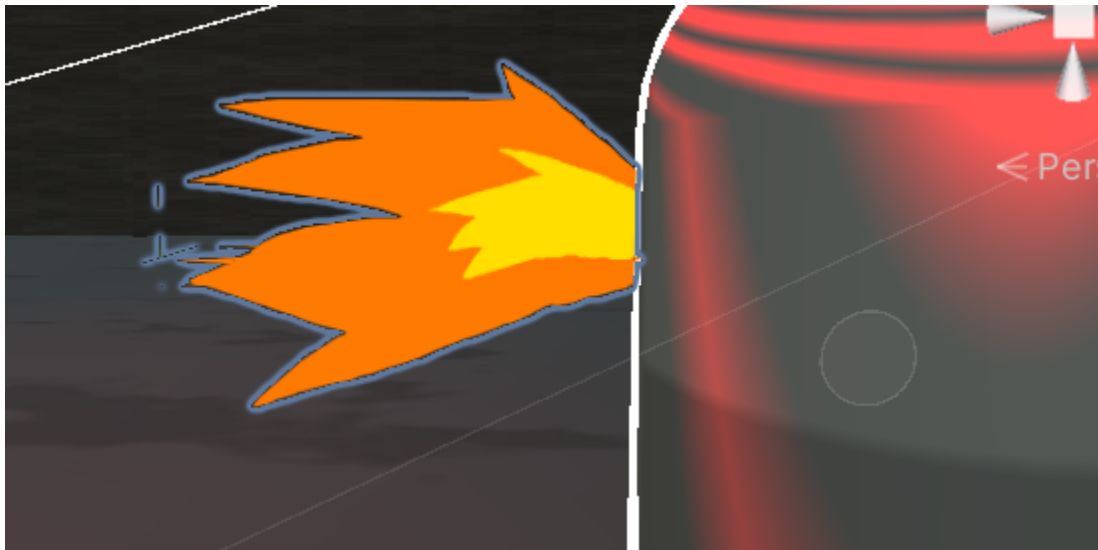

in addition to the texture was made with substance designer, I also painted a glass texture in krita to get a more stylized look in the final version.

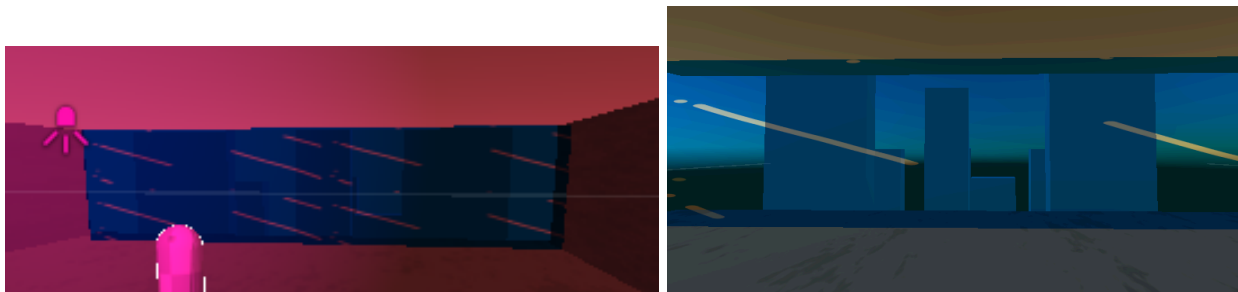

Visual Effects:

Muzzle Flash:

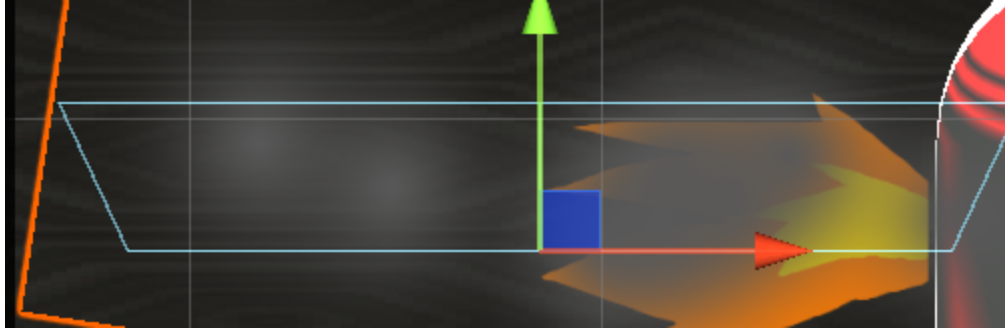

The muzzle flash effect is made using two planes crossed into each other, I used this method instead of the particle system due to it not meeting stylistic requirements

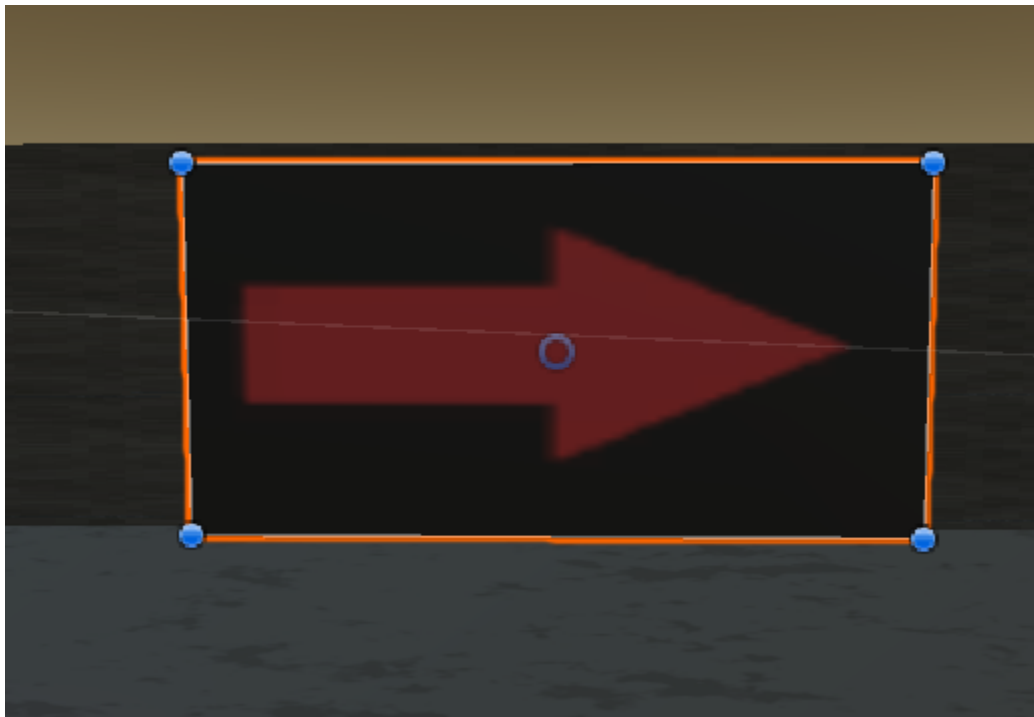

Glass Shader:

The Glass Shader was made by using a fragment shader and a vertex shader it takes the vertices and puts them into clip space from world space, the fragment shader then positions it.

The smoke particles are an added visual flare to show the gun has been fired, it is made using the unity particle system where the particles are slowed down, rotated and move towards the player.

The scrolling texture uses the uvs and transforms it by multiplying time with sine on an axis This is to show the player where to go.
